

CEMManager

Cementing Search & Data Mining Platform

Track and analyze cementing design performance across wells and cases

Data Mining

OVERVIEW

CEMManager is a cloud-based platform that extends the value of CEMPRO by centralizing uploaded well files and organizing them into a structured hierarchy of Well, Casing, and Case. It helps teams review design history, locate wells quickly, compare similar jobs, and extract practical insights from historical cementing data.

KEY BENEFITS

Connected Workflow

- Upload CEMPRO well files into a connected workflow with validation, calculations, and structured organization for consistent case management.

Smart Search

- Locate relevant wells and design cases using natural language, parameters, or advanced filters across Well, Casing, and Case levels.

Data Mining

- Benchmark designs, analyze trends, and identify patterns across datasets with scoped analysis, widgets, and reusable dashboards.

Scalable Review

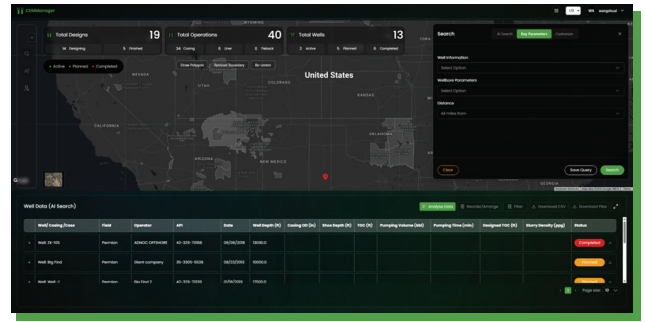

- Move from individual well files to company-wide dashboards and reusable analytical views.

Better Comparison

- Bring similar jobs together for side-by-side review and data-supported engineering decisions.

KEY FEATURES

- Upload local CEMPRO well files
- Well status and district assignment
- Upload progress messages and validation
- Overview widgets for designs, operations, and wells
- Map-based well pin interaction
- Saved filter presets under Overview
- AI Search using natural language
- Key Parameter Search, such as API Number or distance
- Advanced Search across Well, Casing, and Case
- Expandable Well Data table
- Download CEMPRO well files from results
- Analysis Data case selection
- Data Mining scope from Search or active casing
- Filter-driven scope refinement
- Customizable widgets and plots
- Save as Dashboard
- US and SI unit support
