Introducing CEMPRO Live

Elevating Cementing Performance with Real-Time Simulation

What's New?

CEMPRO Live introduces real-time cementing capabilities, giving engineers live visibility into job conditions as they evolve throughout operations. By capturing changes as they happen, it enhances understanding of dynamic well conditions and supports more responsive, informed decision-making during execution.

	Feature	What It Does	Key Benefit
1 	**Real-time Cementing Simulation**	Performs continuous cementing calculations using live field data during operations.	Enables in-job decision-making and reduces risk by identifying issues as they occur.
2 	**Real-time KPI Monitoring & Alerts**	Tracks critical parameters such as BH ECD, pump pressure, flow rate, and stage progress in real-time.	Improves operational awareness and prevents limit exceedance during pumping.

Why Choose CEMPRO Live?

- **Enhanced Efficiency**:
  Streamlined workflows and faster case evaluation reduce preparation time and speed decision-making.
- **Greater Accuracy**:
  Advanced modeling combined with data-driven analysis delivers more reliable and consistent cementing results.
- **Lower Risk & Cost**:
  Early detection of sensitive parameters minimizes non-productive time and costly operational adjustments.
- **Smarter Decisions**:
  Clear visibility into design robustness, uncertainties, and key risk drivers helps teams choose the best course of action.

- **Real-Time Visibility**:
  Real-time cementing capabilities deliver live insight into job conditions as operations unfold, enabling immediate awareness of changes in the field and supporting faster, more informed decision-making during execution.
- **Greater Accuracy**:
  Continuous monitoring of evolving job conditions helps engineers better understand downhole behavior as it happens, improving control and response during cementing operations.
- **Lower Risk & Cost**:
  Live access to changing well conditions allows teams to stay aligned with actual field performance and act with greater confidence during execution.

Existing Major Features At-A-Glance in CEMPRO

- Comprehensive cementing simulation and engineering calculations
- Multi-level well, casing, and case structure
- Case comparison across multiple cementing designs
- Sensitivity analysis for critical operational parameters
- Interactive plots with fully customizable graph settings
- Post-job review, playback, and reporting support

Real-Time Insight. Better Cementing Decisions.

CEMPRO Live introduces real-time cementing capabilities that give engineers live visibility into job conditions as operations unfold. Combined with advanced case comparison and sensitivity analysis, it enables faster, more informed decisions throughout the cementing workflow.
