

# Introducing CEMPRO Version 6.0.0

## Smarter, Faster, More Accurate Cementing Engineering

### What's New?

CEMPRO v6.0.0 advances cementing engineering with built-in case comparison and sensitivity analysis, giving engineers faster insight, greater accuracy, and improved operational awareness and decision-making power throughout the job lifecycle.

	New Feature	What It Does	Key Benefit
	<b>Case Comparison</b>	Provides side-by-side comparison of multiple cementing design cases, highlighting differences in calculated outputs.	Quickly identify the optimal design under current conditions.
	<b>Sensitivity Analysis</b>	Analyzes how changes in key parameters impact cementing results.	Identifies critical drivers affecting ECD, pressure, and operations.

### Why Upgrade?

- Enhanced Efficiency:**  
 Streamlined workflows and faster case evaluation reduce preparation time and speed decision-making.
- Greater Accuracy:**  
 Advanced modeling combined with data-driven analysis delivers more reliable and consistent cementing results.
- Lower Risk & Cost:**  
 Early detection of sensitive parameters minimizes non-productive time and costly operational adjustments.
- Smarter Decisions:**  
 Clear visibility into design robustness, uncertainties, and key risk drivers helps teams choose the best course of action.

## Existing Major Features At-A-Glance

- Comprehensive cementing simulation and engineering calculations
- Multi-level well, casing, and case structure
- Case comparison across multiple cementing designs
- Sensitivity analysis for critical operational parameters
- Interactive plots with fully customizable graph settings
- Post-job review, playback, and reporting support

## Coming Soon

We're building powerful live capabilities to bring CEMPRO directly into operations. Expect tools that turn field data into instant, actionable insight:

- **Real-time Data Acquisition and Live Calculation:**

Continuous cementing simulations driven by live field data so engineers can make in-job adjustments confidently.

- **KPI Monitoring and Intelligent Alerts:**

Tracks critical parameters such as BH ECD, pump pressure, flow rate, and stage progress in real time. Improves operational awareness and prevents limit exceedance during pumping.

These features will transform CEMPRO from a planning and post-job tool into a real-time operational partner –identify risks earlier, react faster, and keep jobs on track.

## Smarter Cementing Starts Here

CEMPRO 6.0.0 empowers engineers to compare scenarios side-by-side, understand how critical parameters impact outcomes, and make faster, more confident decisions throughout the cementing workflow. Upgrade to unlock the next level of decision confidence with advanced case comparison and sensitivity analysis.

**CONFIDENCE IN EVERY CEMENTING DECISION**
