

Introducing the New FracPro Live+ Real-Time Fracture Control and Smarter Workflows

What's New?

FracPro Live+ introduces a suite of powerful tools designed to streamline fracture engineering, quickly visualize wellbore schematics, animate fluid movement in real time, analyze entry friction, automate step-down evaluations, and collaborate seamlessly with multiple users—all within a cloud-based platform.

	New Feature	What It Does	Key Benefit
1	 <p>Added wellbore schematic for well</p>	Shows wellbore schematic	Enables quick view and validation of setup, perforations, and trajectory.
2	 <p>Added real time fluid animation in wellbore schematic</p>	Shows fluid animation inside the wellbore	It allows users to view fluid movement inside the wellbore, when it reaches perforation.
3	 <p>Added wellbore schematic to dashboard</p>	Shows wellbore schematic in dashboard as a pane	Integrated view of treatment data and wellbore in single dashboard.
4	 <p>Added entry friction analysis</p>	Allow user to perform entry friction analysis	Enhances wellbore modeling.
5	 <p>Setting up new step-down analysis</p>	Automates Step Down Analysis by looking at rate changes for quick analysis	Minimizes time required for entry friction Analysis

New Feature

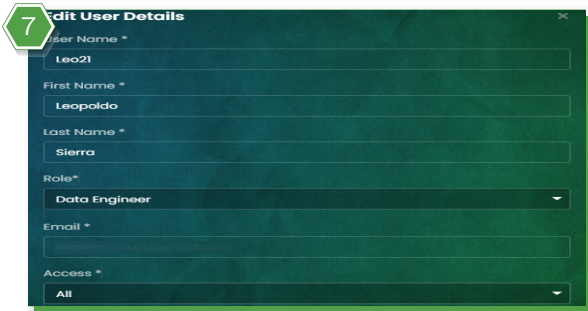

Multi users sharing analysis results

What It Does

Multiple users can perform analyses independently, with results easily shared among users.

Key Benefit

Enables sharing of analysis among users.

Improved access control and added user roles

Allows admins to control which wells each user in a company can access.

Greater ability to manage well access in detail.

Existing Major Features At-A-Glance

- Wellbore, Fluid & Proppant, and Job Schedule setup
- Real-time job monitoring and analysis
- Post job analysis and report generation
- Multiple users can analyze a job and share results

Elevate Your Fracture Workflow

FracPro Live+ gives engineers real-time clarity and collaborative control to optimize treatments and tackle challenges with confidence
