

SolidPRO Solids Control Reporting

Simplify solids control tracking and daily reporting

Cost Distribution

OVERVIEW

SolidsPRO software streamlines solids control report generation and daily work and data recording for technicians. Pad drilling, an important advancement in drilling, involves drilling multiple wellbores from a single location. The software also monitors inventory movements among wells on the same pad.

Our software enhances productivity and simplifies solids control by empowering technicians to manage and record solids removal from drilling fluid efficiently. The software enables easy monitoring of the solids removal process and simplifies report generation.

KEY BENEFITS

Improved Solids Control

- Facilitates tracking of inventory movements among multiple wells on a pad, preventing shortages and overages.
- Enables real-time monitoring of the solids removal process, allowing for better control and optimization.

Cost Reduction

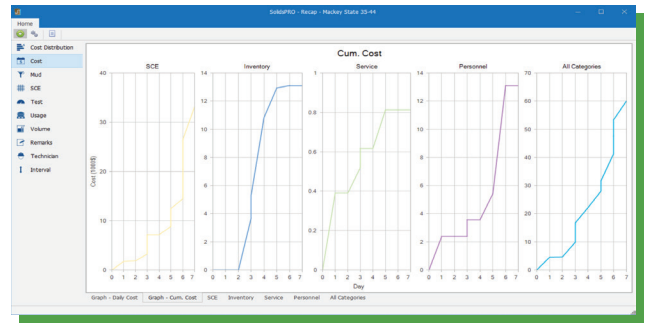

- Access to real-time data and reports allows for informed decision-making, reducing the likelihood of costly mistakes or inefficient practices.
- The combined benefits of increased efficiency, reduced waste, and improved decision-making contribute to lower overall operational costs for drilling operations.

Efficiency and Productivity

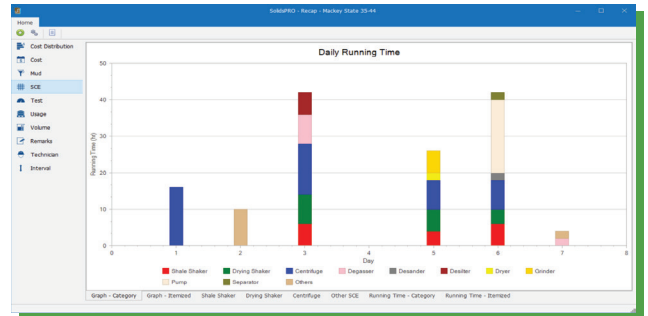

- Automates the generation of solids control reports, saving time and reducing errors.
- Allows technicians to easily record daily work and data, improving accuracy and efficiency.

KEY FEATURES

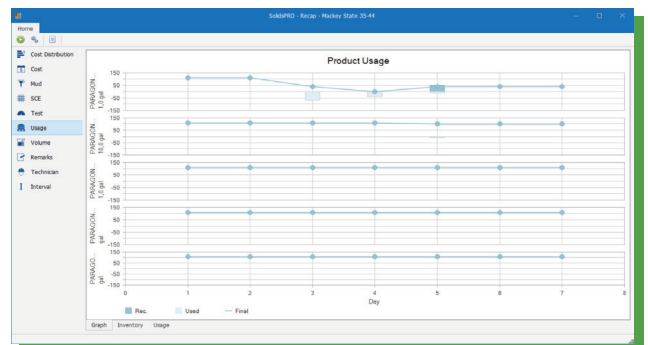

- Pad drilling
- Solids control equipment analysis
- Inventory track
- Cost calculation
- Solids analysis test
- Volume calculation
- Daily report
- Recap for the selected well
- Recap report
- Automatic data backup
- Mud type: water-based, oil-based, and synthetic
- Land and offshore well
- Allow price change for any day
- Company setup
- Tubular database
- Unit: US oil field, metric, and customized
- Unit conversion tools
