

Engineered completion optimization process increases production and NPV, Bone Springs

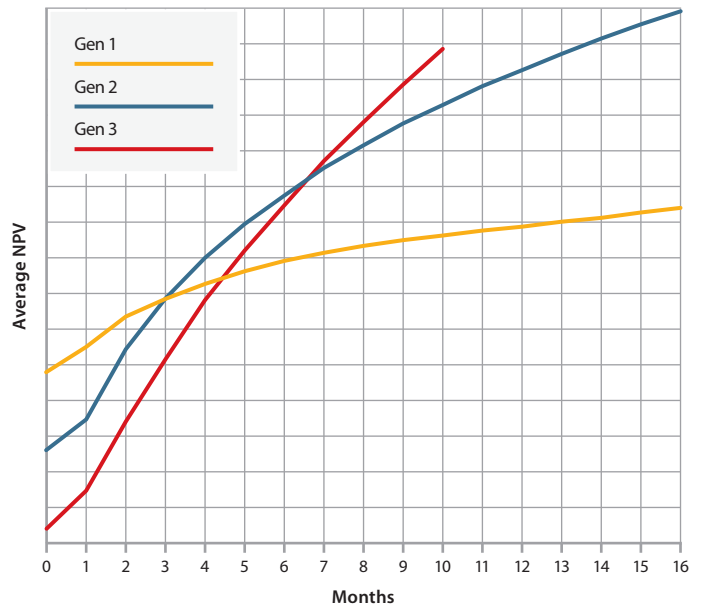

Third generation optimized completion design with more contact and conductivity engineered utilizing low-density ceramic proppant delivers higher production and greater economic value.

Avg Daily Oil Rate (STB/d) vs. Months

Net present value vs. Months

Note: Cost and prices for 2017 based on Well Operating Cost of \$10,000 per month, Discount Factor of 10%, Oil Rate of \$50.00 bbl, Gas Rate of \$2.00 MCF and Water Disposal Cost of \$3.00 bbl

Talk to CARBO to find out how we can help you to engineer an optimized completion to maximize your return from every well.
