

## XOPS

### Features:

- ✓ **Sales:** Manage pricebooks and client contracts. Create and send proposals
- ✓ **Calendar:** Schedule work and share with stakeholders
- ✓ **Logistics:** Easily track material deliveries and onsite inventory.
- ✓ **Resource Management:** Track NPT and manage personnel, equipment and maintenance
- ✓ **Invoicing:** Field ticket creation, estimation and approval
- ✓ **Reporting:** Auto-generate customizable reports for orders, BOL's, stage data, daily updates and post job summaries
- ✓ **Open Access:** Export any data to use in other software such as PowerBI and Spotfire
- ✓ **Version Control:** User profile access designation
- ✓ **Procurement:** Assign PO# and inform vendors of material needs

### AUTOMATION

- QR Codes and OCR used to automatically pull in BOL data
- Automated post-job report – creates and attaches links of PJR, Field Ticket and CSV file to post job email
- Capture pump hours after each stage to maintain a real time log of equipment hours
- Automatic diagnostic picks (start / end job, open well pressure, ISIP, etc)

### DESIGN vs ACTUAL

Automation of several steps in the process opens up time for engineers to get more involved with the job. Several D v A visuals have been built to help the engineers quickly identify anomalies in each treatment (e.g. chem / proppant volumes, cost tracking, NPT, Stages per Day, etc.)

### INTEGRATION EFFORTS

Can easily intergrate with other 3<sup>rd</sup> party data providers and create visual on the XOPS platform. (e.g. Water measurements, diesel displacement, field gas conditioning, offset well pressure)

### EQUIPMENT

Track equipment maintenance and usage capturing details down to each valve, seat and oil change.

## OPERATOR PORTAL

Share XOPS treatment data and reports with your operator clients in their own portal. They are able to:

- See the real time job data
- Access Field Tickets, Post Job Reports and CSV files
- See site inventory status
- View Daily Activity Log
- View their upcoming work on the operations calendar

## Why choose XOPS?

- Manage your entire frac operation from a single, centralized platform either onsite or from a remote operations center
- Increase visibility and accessibility from operations to financial decision making
- Improve service quality assurance of reporting via standardized, streamlined workflows
- Manage equipment maintenance, inventory, materials, and invoicing from anywhere
- Consolidated view of all operational activities and financial KPIs with respect to performance
- Provides necessary visuals and insights needed to minimize non-conformance events
- Eliminates need for multiple single-use applications and manual data entry
- Real time monitoring of frac operations from centralized operations center or client location
- Open-source API to render for internal applications like PowerBI and Spotfire
