

What is New in *STIMPRO 2023*?

STIMPRO® 2023, the latest version of the industry-leading matrix acidizing design and analysis software from StrataGen Inc., is now available.

We have made significant improvements and have added numerous useful new features in *STIMPRO 2023*.

Our goals for this release were further enhancing ease-of-use, updating existing models for improved accuracy & speed as well as incorporating many other user requests.

Version 10.13.2.0

Acidizing Model

- Improved acid reaction retardation effect consideration
- Improved thermal effect consideration for rock and stimulation fluids
- Added Visco-Elastic (VE) & Self Diverting Acids (SDA) simulation capability
- Added Inflow Control Devices (ICD's) effect on stimulation fluid distribution for long horizontal completions
- Added Perforations Discharge Coefficient effect for stimulations performed at high treatment rate
- Added perforations friction effect calculations along perforated intervals
- Added wellbore 3D view option to better visualize the wellbore and navigation horizon
- Added Bottom Hole Treatment Pressure (BHTP) calculation at top of perforated interval. Important for horizontal completions with long perforated interval

Fixes

- Fixed minor errors in Paccaloni Plot option
- Activated the stop of simulation option when simulated pressure exceeds formation parting pressure
- Fixed production analysis option for horizontal completions
